Introduction Travertino Series

Travertine tiles are a timeless choice for adding elegance and sophistication to interior and exterior spaces alike. Formed by the natural precipitation of minerals in groundwater, travertine is a type of limestone that often features unique patterns and textures, ranging from subtle earthy tones to more pronounced veining.

DIGITAL FULLBODY TILES

The Traventino Digital Fullbody tiles are designed to maintain their appearance over time, even with heavy use, because the color and material extend throughout the entire thickness of the tile. This means that if the surface does get scratched or worn down, the same color and material will be visible underneath, helping to maintain the overall aesthetic appeal. It's a great option for maintaining a charming look even after years of use.'

Roman Series...

In addition to their functional role in construction, Roman collection often featured decorative designs and patterns. These tiles are highly durable and are often used in high-traffic areas such as commercial spaces, outdoor areas, and industrial settings. They are resistant to wear and tear, making them suitable for environments where maintaining a pristine appearance is essential.
